

Design Sprint 3

Jamel Douglas, Jack Miller, Logan Smith

Device Registration

Students looking to gain network access on a gaming or streaming device, such as Xbox, Playstation, or Apple TV, must register the device's wired MAC address. Use this form to sign in and manage your devices.

If your TV only has support for a wireless connection, it cannot get access to ResNet. However, if you register the TV's wireless MAC address, it will be able to connect to the insecure FSUGuest wireless network.

Your registrations are valid until the end of the summer semester. They will be deleted sometime between the summer and fall semesters and must be renewed every year.

You can register devices using the form located above. If you need help locating your device's MAC address, please visit the [How To](#) page.

Knowledge

What is a MAC address?

Answer

A media access control address (MAC address) is a unique identifier assigned to network interfaces for communications on the physical network segment. MAC addresses are a combination of 16 letters or numbers and displayed in the format 1a:2b:3c:4d:5e:6f:7a:8b

?

- Combine CamReg and ResReg into one system.
- Network Team should have backend access to this system as they will be maintaining it. When a user submits a MAC address, this service will run a script that will run the commands necessary to give users access to the internet.
- Identifying the type of devices is not entirely necessary for the network team, but each user should have a way to know what MAC address belongs to a certain device
- Link to FAQs on the login page leads to a page that no longer exists.
